

Buy Smart !! - Get 15% more usable film on every roll !!

How To Put Less Film In Your Trash Can & More Film On Your Customer's Windows

40" x 100' has become the most popular size over the last few years - but this is the size that produces the most waste. Many back windows are less than 40" high. 40" rolls also produce a large amount of waste on side windows. Many side windows are 18" (or less) and pickup trucks are often more than 20", which really wastes film. There is a much smarter way to order !!

It makes much better sense to order your film on 60" and then take advantage of our FREE custom cutting. We have learned from our most savvy and experienced dealers that buying a 60" wide roll slit down to 38" / 22" produces the smallest amount of waste. Here's how it works:

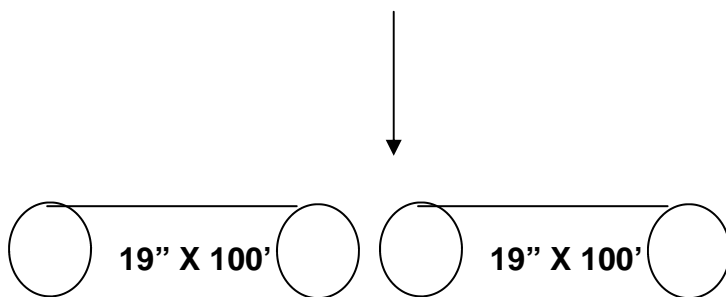

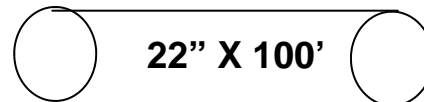

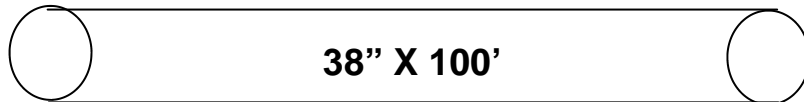

ORDER A 60" ROLL - WE WILL SLIT IT FOR YOU 38" / 22"

It's like getting 3 perfect sized rolls in one !! Here's how:

The 38" Roll Does **EVERY** back window!
That's an immediate 5% savings!

The 22" roll works for all the oversized side windows - like pickups

Save even more by slitting the 38" roll in half to 19"/19" on your own, whenever you need to.

It works for almost every car side glass !

You'll also be saving on freight, because you won't have to order as often !!
